UF-Texco Universal CV Boots

UF-Texco Universal CV Boots offer four distinct advantages :

- Quality : premium neoprene construction combined with a superior design ensures a long and trouble-free service life
- Time savings: with the “over the joint” installation there is no need anymore to remove drive axles or to disassemble CV joints
- Convenience: the internal anchor ribs and the external clamp alignment areas make the boots and the clamps easy to install, even on difficult applications like small French cars.
- Lower inventory : UF-Texco CV boots will reduce your inventory costs significantly, as only two boot models are needed to cover almost all passenger car and delivery van applications on the market :
 - Standard Model : CV joint diameters from 65 to 90 mm
 - XL Model : CV joint diameters from 90 to 115 mm

High quality stainless steel clamps, premium CV joint grease and easy-to-follow, illustrated installation instructions are included with every one-pack and every 12- pack boot kit

Partnumber Description

SP2001	UF-Texco	1-Pack Universal CV Boot, neoprene *
